

ASSIGNMENT

- Make a card like this containing all the information in it.
- Make multiple items(cards) just like in facebook news feed and place it in a list view to make scrollable.
- Implement GestureDetector() widget to make each card clickable.
- After clicking each card detailed page should be opened where place leading in Appbar to go to previous page.
- You can design your own detailed page with the information available in this card.
- Image, description, react counts, comment and share counts should be different for each card in listview.
- To make different colored text in single line you can use RichText() widget.
